

Citi Bike Tableau Analysis

The citi bike data I used was from March 2016. I used Tableau to create ten different charts. According to the ten charts, I figured out the following questions.

1. The top five oldest start stations are:

- Riverside Dr & W82 St
- E81 St & Park Ave
- Riderside Dr & W 78 St
- W 78 St & Broadway
- Penn Station Valet

The oldest start station was 48 years old.

2. The top ten oldest end stations are:

- 5 Corners Library
- W 78 St & Broadway
- NYCBS deport BAL
- Riverside Dr & W 82 St
- Columbia St & Riverside St

The oldest end station was 55 years old.

3. The number of male participants used citi bike was three times than female participants, but female's average trip duration was higher than males. Bike Id is 18105 had the highest number of trip duration.

4. Average trip duration got dramatically increased around late age of 80 to early age of 90. After age of 92, the average trip duration dropped down. Bike birth year in 1927 had the highest number of average trip duration.

5. The peak hours for usage of bikes were 8am and 6pm on March 2016.

6. According the population location charts, a lot of people use citi bike, they live in Brooklyn area. People also ride citi bike to New Jersey from Manhattan.
